

ZIGSMOTION

WHITEPAPER & INVESTMENT PROPOSAL

The AI film studio. From an idea to a finished film.

ZigsMotion turns an idea, a script or a product photo into finished animation, ads, VFX, voices and long-form video — in any language — inside one studio.

PROGRAMME	TRACK	DATE	WEB
Startup Qatar Investment Program	START · up to US$1.1M	October 2026	zigsmotion.com

01 · EXECUTIVE SUMMARY

One studio for everything a video needs.

Every brand, creator and broadcaster now needs more video than ever — in more formats and more languages. Making it still takes a crew, a studio, weeks of work and a stack of separate tools. ZigsMotion replaces that with one AI studio that goes from an idea to a finished film.

The product

Eight AI modules in one pipeline: **Idea → Pixar-style film**, **Product → Ad** (UGC, showcase, luxury), **VFX**, **3D character designer**, **set designer**, **motion graphics**, a **natural voice generator** and **5–10 minute explainer videos**. Consistent characters across every shot; output in any language.

The proof

Our tools already power real channels: **Lucky & Nikki World** (Pixar-style family series, **40M+ views**, reels at 10M+ and 8M+), **IceHill Music** and **IceHill Bhakti** on YouTube, and **Blacklight Motion**'s client ads. Full-length AI films — an 8½-minute music video, a 5½-minute explainer — show the long-form edge.

40M+
views on one ZigsMotion-made series

8
AI modules in a single studio

5–10 min
long-form episodes, not 5-second clips

US$1.1M
START track request, in milestone tranches

The ask & the plan in Qatar

We are applying to the **START track for up to US$1.1M**, released against agreed milestones, to incorporate ZigsMotion in Qatar, take the studio from MVP to a commercial platform, and launch **Arabic-first** creation tools for GCC brands, creators and media. Qatar's investment in media and AI — including Media City Qatar — makes Doha the right base to serve the region's fastest-growing ad market.

02 · THE PROBLEM

Demand for video exploded. Making it didn't get easier.

Brands post every day, on every platform, in every language their customers speak. Production hasn't kept up.

01

Too slow, too expensive

A single animated or VFX ad means scripting, casting, sets, shooting or animation, voice, edit and grade — weeks of work and a crew. Most small brands and creators simply can't afford it.

02

Ten tools for one video

Today's AI tools each do one step: an image model here, a video model there, a separate voice tool, a separate editor. Characters drift between shots, and stitching it together is still manual work.

03

Stuck at five seconds

Most AI video stops at short clips. Audiences, YouTube and broadcasters want stories — 5 to 10 minute episodes with the same characters, narration and chapters.

04

The language gap

Leading tools are English-first. Arabic, Hindi and regional-language audiences — hundreds of millions of viewers — are underserved, though they are where growth is.

Who feels it most

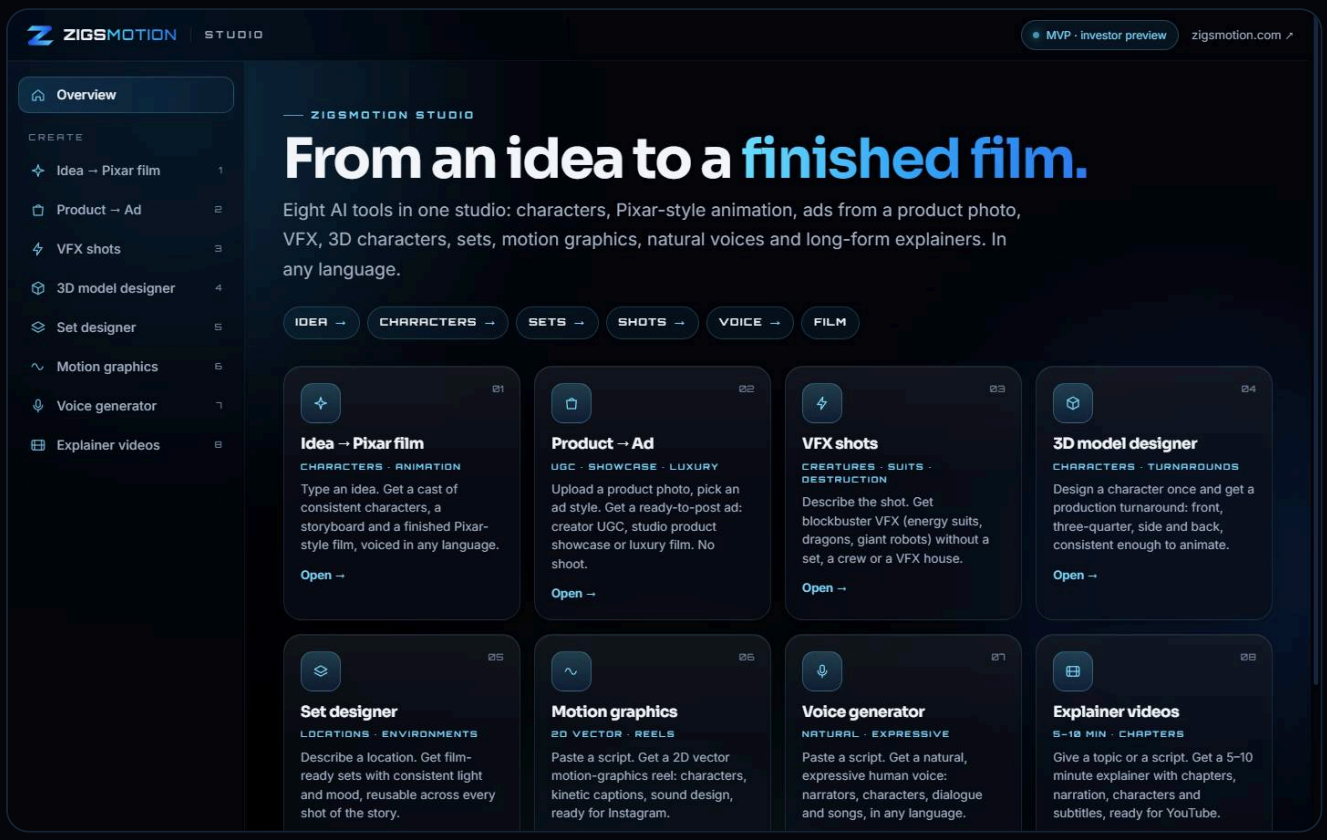

- **Brands & D2C sellers** who need ads every week.
- **Creators & channels** who need consistent characters and series.
- **Agencies & studios** under pressure on cost and turnaround.
- **Media & education** needing long-form explainers in local languages.

03 · THE SOLUTION

ZigsMotion Studio: eight tools, one pipeline.

One workspace takes a project from the first idea to a finished, delivered film. Every module shares the same characters, sets and voices, so the output stays consistent from shot to shot and episode to episode.

IDEA → CHARACTERS → SETS → SHOTS → VOICE → FINISHED FILM

Consistent characters

Design a cast once; it stays on-model in every shot, reel and episode.

Any language

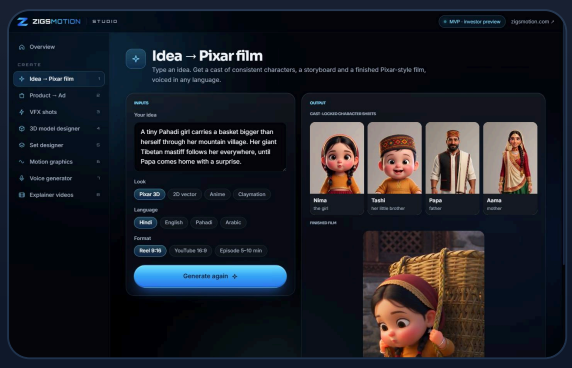

Scripts, voices and captions in Arabic, Hindi, English and regional languages.

Every format

Reels 9:16, YouTube 16:9, square feed — plus long-form episodes with chapters.

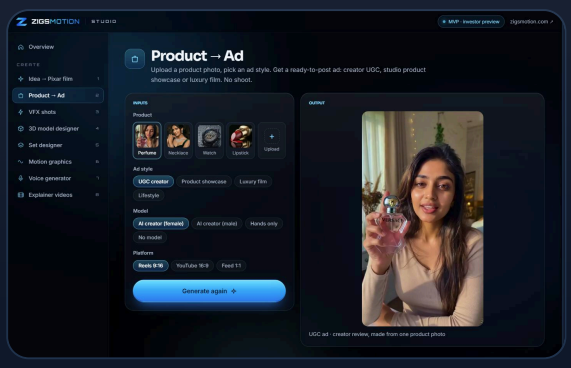

04 · PRODUCT

What the studio makes.

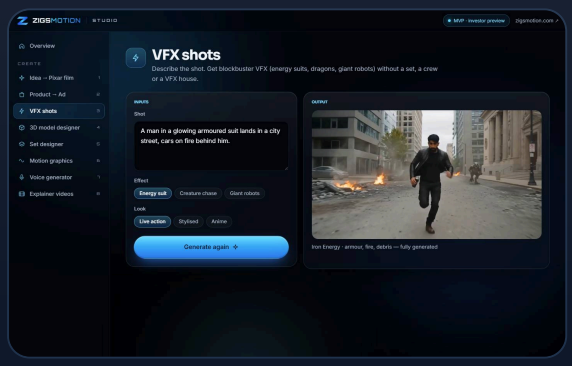

01 Idea → Pixar-style film

Type an idea; get a cast of characters, a storyboard and a finished Pixar-style 3D film with voices and music. Powers Lucky & Nikki World (40M+ views).

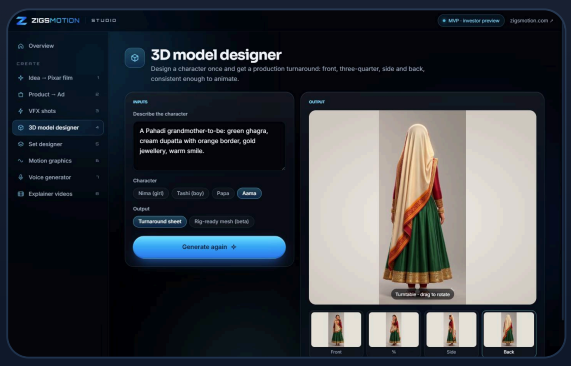

02 Product → Ad

Upload one product photo; choose UGC creator, product showcase, luxury film or lifestyle. Get a ready-to-post ad with AI model, set, light and captions — no shoot.

03 VFX shots

Describe the shot; get blockbuster effects — armoured suits, creatures, giant robots, destruction — with matched light and grain, without a VFX house.

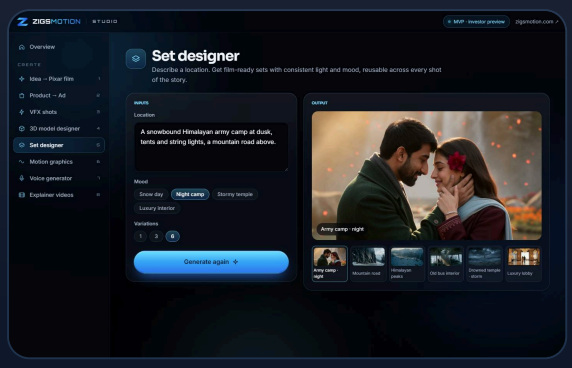

04 3D model designer

Design a character once; get a production turnaround (front, ¾, side, back) consistent enough to animate. Rig-ready mesh export is on the roadmap.

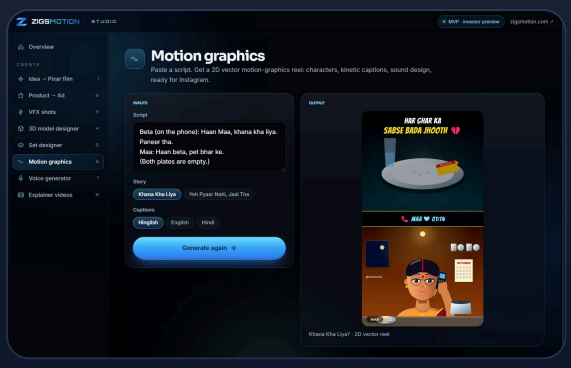

04 · PRODUCT

From sets to long-form.

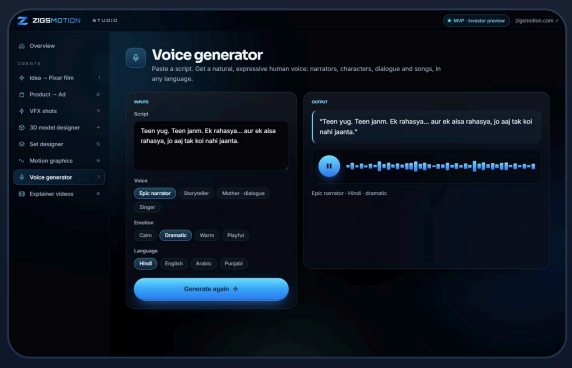

05 Set designer

Describe a location; get film-ready sets with consistent light and mood, reusable across every shot — snowbound camps, temples, luxury interiors.

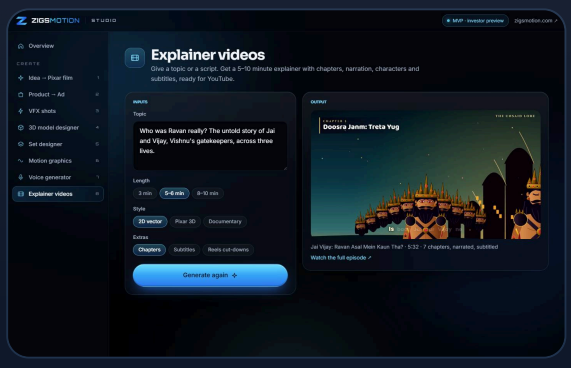

06 Motion graphics

Paste a script; get a 2D vector motion-graphics reel with characters, kinetic captions and sound design, rendered by our in-house engine.

07 Natural voice generator

Paste a script; choose a voice and an emotion. Get natural, expressive narration, character dialogue or singing — in any language.

08 Explainer videos

Give a topic or script; get a 5–10 minute explainer with chapters, narration, characters and subtitles, ready for YouTube and as Reels cut-downs.

05 · TECHNOLOGY

An orchestration layer over the best models.

Foundation models get better every quarter. Our value is the layer above them: turning an idea into a plan, keeping characters and sets consistent, routing every step to the right model, and assembling a finished film.

LAYER	WHAT IT DOES
Story & planning	Breaks an idea or script into scenes, shots, characters, sets and dialogue; produces the shot list the rest of the pipeline follows.
Character Lock	Turns character sheets and reference images into a locked cast, so faces, outfits and proportions stay consistent across shots and episodes.
Model router	Sends each task to the best engine for it — today ByteDance Seedance 2.5 / 2.0 for video and Seedream 5 for images, ElevenLabs-grade voices — and swaps engines as better ones ship.
Stories engine	Our in-house 2D vector (SVG) animation and motion-graphics renderer for long-form episodes and reels: scenes, captions, chapter cards, mixing.
Cost engine	Prices every render from the provider's real cost with a guaranteed gross margin, and shows the price before anything is generated.
Media pipeline	Stores every output permanently, streams long films (HLS), and delivers platform-ready masters, thumbnails and captions.

Model-agnostic

No lock-in to one AI vendor; quality rises as the models do, while our workflow, data and characters stay ours.

Safe by design

Spend locks on paid renders, permanent storage of outputs, and consent rules for real people's likenesses.

Built, not slideware

Studio, credits, billing, storage, the Stories engine and the live website are already built and running.

06 · TRACTION & PROOF

Already in front of tens of millions.

Lucky & Nikki World · Instagram

A Pixar-style 3D family series made with ZigsMotion. **40M+ total views**, individual episodes at **10M+**, **8M+**, **5.6M** and **3M** views; a new episode every week.

IceHill Music

17 original songs & music videos on YouTube.

IceHill Bhakti

18 devotional films & bhajans, incl. live-action Narasimha.

Blacklight Motion

AI ads & films for brands, incl. client EaseMyPrint.

Long-form, end to end

Oh Mere Ranjhana — an 8½-minute music video made entirely with AI. **Jai Vijay** — a 5½-minute, seven-chapter mythology explainer from one script.

Live today

zigsmotion.com is live with the portfolio and early-access sign-ups; the studio MVP is live at **zigsmotion.com/mvp**.

07 · MARKET

Two fast-growing markets meet in one product.

ZigsMotion sits where AI video tooling meets the world's fastest-growing digital advertising region.

US$8.2B
MENA digital ad spend in 2025, up 17.8% year on year — the fastest-growing region globally (IAB MENA, via AGBI).

+23.6%
growth in social video ad spend in MENA in 2025; connected TV +31%.

US$2.8B
MENA video ad spend by 2025, ~20.6% CAGR since 2020.

US$0.8–2.3B
global AI video generator market in 2025, forecast to grow 13–33% a year to 2030 (range across analysts).

US$149.5B
global creator economy in 2025; video platforms hold ~49% share.

~69%
of MENA ad spend already digital in 2025; over 70% in the UAE.

Who we sell to

SEGMENT	NEED	ZIGSMOTION OFFER
Creators & channels	Weekly episodes with consistent characters	Self-serve studio, pay per render
Brands & D2C	Ads every week, every platform	Product → Ad, UGC & showcase templates
Agencies & studios	Faster, cheaper production	Team plans, VFX, sets, 3D characters
Media & education	Long-form in local languages	Explainers, Arabic voices, enterprise

Sources: IAB MENA ad-spend data via AGBI and Algrowise; Grand View Research, Research and Markets, MarkNtel Advisors (AI video generator market); Evolvance (creator economy). Figures are third-party estimates.

08 · WHY QATAR

Doha as our base for the GCC.

Qatar is investing deliberately in media, AI and the creative economy. ZigsMotion fits that agenda and needs exactly what Qatar offers: a credible regional base, a media ecosystem and access to the GCC.

Media City Qatar

100% foreign ownership, tax and customs exemptions and streamlined licensing for media and technology companies; a growing hub of media firms and partners.

Qatar National Vision 2030

Economic diversification into knowledge industries; AI-enabled content creation strengthens the local creative sector and exports Qatari stories.

Arabic-first content

Arabic speakers are underserved by English-first AI tools. We will make Arabic voices, scripts and captions a first-class part of the studio from Doha.

Gateway to the GCC

From Qatar we serve Saudi Arabia (~US$4.2B ad market) and the UAE (~US$2.5B) — the region's two largest — plus the wider MENA market.

Our Qatar plan

- Incorporate ZigsMotion in Qatar and base the founding team and product development in Doha.
- Launch Arabic voices, Arabic captions and GCC-ready ad templates (Ramadan, Eid, National Day, retail seasons).
- Partner with Qatari media, agencies and education providers for pilots and long-form Arabic content.
- Hire locally for product, AI engineering and partnerships as the platform scales.

Sources: Qatar Tribune, Media City Qatar, Startup Qatar Investment Program; GCC market sizes via IAB MENA analysis.

09 · BUSINESS MODEL

Pay per render, with margin built in.

Customers buy credits and spend them on any module. Every render is priced from the AI provider's real cost plus a fixed margin, so revenue scales with usage and every render is profitable.

REVENUE STREAM	WHO	HOW IT'S PRICED
Credit packs	Creators, small brands	One-off packs from US$29 (600 credits) to US$199 (5,400 credits); no subscription, credits don't expire
Team & agency plans	Agencies, studios	Monthly seats plus pooled credits to confirm
Enterprise & API	Media, education, platforms	Annual contracts, volume pricing, Arabic/long-form pipelines to confirm
Studio services	Brands wanting done-for-you	Per-project production via our studio team (as Blacklight Motion does today)

40%
minimum gross margin on every generated render, enforced by the cost engine

$0.037
per credit on the largest pack — the floor the margin is calculated on

0
renders sold below cost: prices update when provider rates change

Example: a 15-second Pixar-style reel

Provider cost on Seedance 2.0 at 720p ≈ US$2.25 → customer price 86 credits ≈ US$3.17. The same reel from a traditional animation studio typically costs hundreds to thousands of dollars and takes days.

10 · COMPETITIVE LANDSCAPE

Point tools vs a full studio.

The market is full of excellent single-purpose tools. ZigsMotion's advantage is the finished film: one pipeline, consistent characters and long-form output in local languages.

CATEGORY	EXAMPLES	WHAT THEY DO WELL	WHERE ZIGSMOTION DIFFERS
AI video models	Sora, Veo, Runway, Kling, Pika	Short, high-quality clips	We orchestrate these models into a finished story; not a single clip
Avatar & explainer	Synthesia, HeyGen	Talking-head presenters	Characters, worlds and narrative, not a presenter at a desk
Voice	ElevenLabs	Natural speech	Voice is one step inside a full production pipeline
Creative suites	Adobe, Canva	Editing & design	Generates the footage itself, from an idea
Agencies & studios	Traditional production	Craft & control	Hours not weeks; a fraction of the cost

Our moats

- End-to-end pipeline and in-house Stories engine
- Character Lock across shots and episodes
- Proven audience results (40M+ views)
- Regional language focus: Arabic, Hindi, regional

Why now

- Video models crossed the quality bar in 2025–26
- Costs per second are falling fast
- MENA is the fastest-growing digital ad region
- No dominant end-to-end, Arabic-first studio yet

11 · MILESTONES & USE OF FUNDS

US$1.1M in tranches, tied to milestones.

TRANCHE	TIMING	MILESTONES	TARGET KPIS
T1 · Set up	Months 0–3	Incorporate in Qatar; core team in Doha; all 8 modules generating live in the studio; Arabic voice & captions in beta	Private beta with 50 creators & brands target
T2 · Launch	Months 3–6	Public launch; credit packs with regional payment providers; GCC ad templates; first Qatari partnerships	1,000 users · first paying agencies target
T3 · Scale	Months 6–12	Team & agency plans; enterprise/API; long-form Arabic explainers; 3D mesh export	Recurring revenue & 3 enterprise pilots target

Proposed use of funds

Product & AI engineering	40% · $440K
Compute & model credits	20% · $220K
Go-to-market (GCC)	20% · $220K
Qatar operations & team	10% · $110K
Legal, IP & compliance	5% · $55K
Contingency	5% · $55K

Allocation

Proposed split; final allocation and KPIs to be agreed with Startup Qatar as tranche milestones.

12 · TEAM

Builders who already ship.

Jagjeet Jena · Founder

Builds the ZigsMotion platform and its AI pipeline; creator behind Lucky & Nikki World, IceHill Music & IceHill Bhakti, and Blacklight Motion; lyricist on *Oh Mere Ranjhana*. full bio to confirm

Hiring in Doha

AI/ML engineer · full-stack engineer · Arabic content & voice lead · GCC partnerships & sales.

co-founders & advisors to confirm

13 · RISKS & MITIGATIONS

RISK	MITIGATION
Dependence on AI vendors	Model-agnostic router; multiple providers per task; in-house Stories engine for long-form
Model prices change	Cost engine re-prices automatically; 40% margin floor on every render
Content & likeness misuse	Consent rules for real people, content policy, moderation, audit trail of every render
Fast-moving competition	Focus on the finished film, characters and long-form; regional languages; proven audience results
